EXPERIENCE

Invicto Labs — Backend & Automation Engineer Intern

Bangalore, India | Aug 2025 – Dec 2025

- Developed and maintained automation workflows for **100+ U.S. county websites** using **Node.js, Express.js, and Puppeteer** to automate property tax and mortgage record retrieval.
- Automated property verification** by retrieving tax dues, payment history, and property information using unique property identifiers.
- Built **Express.js API endpoints** to trigger county-specific automation and integrate retrieved data into internal business workflows for mortgage verification.
- Designed end-to-end **Puppeteer** automation workflows for multi-step county portal verification, **eliminating manual navigation** and accelerating mortgage verification processing.

TRIOT Solutions — Full Stack Developer Intern

Remote, India | Jan 2025 – Jul 2025

- Enhanced an existing **Spring Boot** backend by implementing **REST APIs**, integrating **PostgreSQL** with **Spring Data JPA**, and securing user authentication using **BCrypt** password hashing.
- Designed and implemented **ride-booking workflows**, enabling owners to manage vehicle availability, booking requests, and trip assignments.
- Developed secure authentication and role-based onboarding workflows for users and vehicle owners using **Spring Boot** and **BCrypt** authentication.
- Collaborated in an **Agile development** environment to integrate **Spring Boot REST APIs** with the **React** frontend, delivering end-to-end ride-booking workflows.

PROJECTS

[Nivora Finance Backend](#) — FinTech Wallet & Payment Platform

Java • Spring Boot • Spring Security • PostgreSQL • Redis • Docker • GitHub Actions

- Built a production-grade fintech backend exposing **REST APIs** for wallet management, secure money transfers, and **JWT/OTP authentication** using **Spring Boot, Redis, and PostgreSQL**.
- Engineered a **concurrency-safe** wallet using **pessimistic locking** and **idempotency keys**, handling **6,427 concurrent transfer requests with 0% failures** during **k6 load testing**.
- Secured authentication and payment APIs using **Redis-based rate limiting**, reducing the risk of **brute-force attacks** and **abusive request patterns**.
- Achieved **77% unit test coverage** across authentication, wallet, transaction, QR payment, and notification services using **JUnit 5, Mockito, and JaCoCo**.
- Implemented a **3-stage GitHub Actions CI/CD** pipeline to automate **testing, build, and Docker** image publishing to **GitHub Container Registry (GHCR)**.

[AskApp Backend](#) — Event-Driven Q&A Platform

Java • Spring WebFlux • MongoDB • Apache Kafka • Elasticsearch

- Built a fully **reactive** Q&A backend using **Spring WebFlux** and **MongoDB**, eliminating the traditional **thread-per-request** model for better **scalability**.
- Integrated **Elasticsearch** to provide **low-latency full-text search** across questions and answers.
- Designed an **event-driven architecture** using **Apache Kafka**, decoupling notification and feed generation into independent services for improved scalability and fault isolation.

TECHNICAL SKILLS

Languages: Java, SQL, JavaScript, TypeScript

Backend: Spring Boot, Spring WebFlux, Spring Security, Spring Data JPA, Hibernate, REST APIs, Kafka

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

DevOps & Cloud: Docker, GitHub Actions, AWS EC2, AWS S3, Linux, Git, Postman

Testing: JUnit 5, Mockito, JaCoCo

Core Concepts: Distributed Systems, Event-Driven Architecture, Concurrency Control, Idempotency, Rate Limiting

EDUCATION

Jain University — MCA

Bangalore | Jul 2024 – Present

Girijananda Chowdhury University — BCA

Guwahati | Aug 2020 – Jul 2023
